

LOCATION: ST-3-586

HYDRAULIC CONDITIONS: Apparent confined in saturated alluvium (Santa Fe Group)

PERTINENT OBSERVATIONS: Formation water produced while drilling at 490'. Finish drilling to 615' and measured water level at 425.26' top of tremie in open borehole prior to well completion. Pre-development water level at 426.46' (T.O.C.) on 04/08/92 and post-development water level at 426.62' (T.O.C.) on 04/13/92.
